

# "A contribution to spreading the GeoPolymer knowledge."

*by Emmanuel Olivi*

**Geopolymer Camp at Saint-Quentin 6-8 july 2015**

**GEOPOLYMER**CAMP

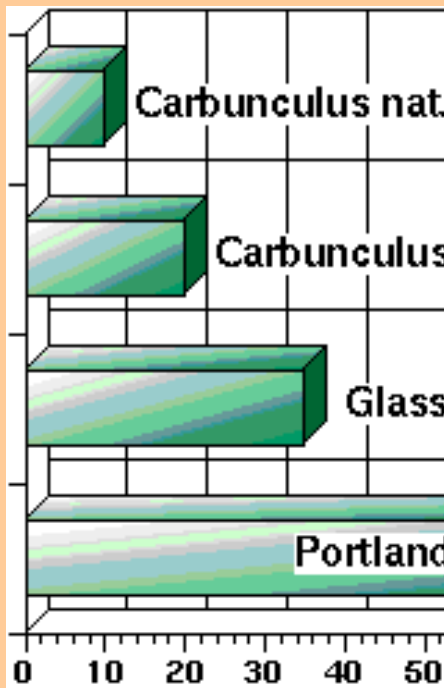

*Who am I ?*

- PhD **but** in applied mathematics (for medical imaging). Now, software engineer.
- Curious in Geopolymers & Archaeology.

# Les géopolymères ou la (re)découverte de la science des pierres par Joseph Davidovits

# Open access to geopolymer science

- Big industries do not use geopolymers not because it is not worth it, but because they do not have the patent, nor the control of it, ...
- In **computer science**: free softwares (GNU\Linux) still prospers because it is open to everyone, and everyone can contribute.
- Community: spread the knowledge through **openaccess**, easy **recepies** on how to use geopolymers with local materials.

# Future plans

- Build a water tank.
- Master ceramic for art. Use plants ashes as in ancient constructions.
- Talk with local friends and local builders
- Build a house ? An anti-sismic Inca wall ?
- Make a 3D printer to print small pyramids ??

*Having fun with geopolymers !!*
